$$u(t) = \begin{cases} e^{-at} & t \geq 0 \\ 0 & t < 0 \end{cases}$$

$$U(f) = \frac{1}{a+i2\pi f} \quad \text{[from before]}$$

$$v(t) = \cos 2\pi Ft$$

$$V(f) = 0.5 (\delta(f + F) + \delta(f - F))$$

$$w(t) = u(t)v(t)$$

$$W(f) = U(f) * V(f) \\ = \frac{0.5}{a+i2\pi(f+F)} + \frac{0.5}{a+i2\pi(f-F)}$$

If $V(f)$ consists entirely of Dirac impulses then $U(f) * V(f)$ just **replaces each impulse with a complete copy of $U(f)$** scaled by the area of the impulse and shifted so that 0 Hz lies on the impulse. Then add the overlapping **complex** spectra.

Convolution Theorem

7: Fourier Transforms:
Convolution and Parseval's
Theorem

- Multiplication of Signals
- Multiplication Example
- Convolution Theorem
- Convolution Example
- Convolution Properties
- Parseval's Theorem
- Energy Conservation
- Energy Spectrum
- Summary

Convolution Theorem:

$$\begin{aligned}w(t) = u(t)v(t) &\Leftrightarrow W(f) = U(f) * V(f) \\w(t) = u(t) * v(t) &\Leftrightarrow W(f) = U(f)V(f)\end{aligned}$$

Convolution in the time domain is equivalent to multiplication in the frequency domain and vice versa.

Proof of second line:

Given $u(t)$, $v(t)$ and $w(t)$ satisfying

$$w(t) = u(t)v(t) \Leftrightarrow W(f) = U(f) * V(f)$$

define dual waveforms $x(t)$, $y(t)$ and $z(t)$ as follows:

$$\begin{aligned}x(t) = U(t) &\Leftrightarrow X(f) = u(-f) \\y(t) = V(t) &\Leftrightarrow Y(f) = v(-f) \\z(t) = W(t) &\Leftrightarrow Z(f) = w(-f)\end{aligned}$$

[duality]

Convolution Theorem

7: Fourier Transforms: Convolution and Parseval's Theorem

- Multiplication of Signals
- Multiplication Example
- Convolution Theorem
- Convolution Example
- Convolution Properties
- Parseval's Theorem
- Energy Conservation
- Energy Spectrum
- Summary

Convolution Theorem:

$$\begin{aligned}w(t) = u(t)v(t) &\Leftrightarrow W(f) = U(f) * V(f) \\w(t) = u(t) * v(t) &\Leftrightarrow W(f) = U(f)V(f)\end{aligned}$$

Convolution in the time domain is equivalent to multiplication in the frequency domain and vice versa.

Proof of second line:

Given $u(t)$, $v(t)$ and $w(t)$ satisfying

$$w(t) = u(t)v(t) \Leftrightarrow W(f) = U(f) * V(f)$$

define dual waveforms $x(t)$, $y(t)$ and $z(t)$ as follows:

$$\begin{aligned}x(t) = U(t) &\Leftrightarrow X(f) = u(-f) \\y(t) = V(t) &\Leftrightarrow Y(f) = v(-f) \\z(t) = W(t) &\Leftrightarrow Z(f) = w(-f)\end{aligned}$$

[duality]

Now the convolution property becomes:

$$w(-f) = u(-f)v(-f) \Leftrightarrow W(t) = U(t) * V(t)$$

Convolution Theorem

7: Fourier Transforms:
Convolution and Parseval's
Theorem

- Multiplication of Signals
- Multiplication Example
- Convolution Theorem
- Convolution Example
- Convolution Properties
- Parseval's Theorem
- Energy Conservation
- Energy Spectrum
- Summary

Convolution Theorem:

$$w(t) = u(t)v(t) \Leftrightarrow W(f) = U(f) * V(f)$$
$$w(t) = u(t) * v(t) \Leftrightarrow W(f) = U(f)V(f)$$

Convolution in the time domain is equivalent to multiplication in the frequency domain and vice versa.

Proof of second line:

Given $u(t)$, $v(t)$ and $w(t)$ satisfying

$$w(t) = u(t)v(t) \Leftrightarrow W(f) = U(f) * V(f)$$

define dual waveforms $x(t)$, $y(t)$ and $z(t)$ as follows:

$$\begin{aligned} x(t) = U(t) &\Leftrightarrow X(f) = u(-f) && \text{[duality]} \\ y(t) = V(t) &\Leftrightarrow Y(f) = v(-f) \\ z(t) = W(t) &\Leftrightarrow Z(f) = w(-f) \end{aligned}$$

Now the convolution property becomes:

$$w(-f) = u(-f)v(-f) \Leftrightarrow W(t) = U(t) * V(t) \quad \text{[sub } t \leftrightarrow \pm f \text{]}$$

Convolution Theorem

7: Fourier Transforms:
Convolution and Parseval's
Theorem

- Multiplication of Signals
- Multiplication Example
- Convolution Theorem
- Convolution Example
- Convolution Properties
- Parseval's Theorem
- Energy Conservation
- Energy Spectrum
- Summary

Convolution Theorem:

$$w(t) = u(t)v(t) \Leftrightarrow W(f) = U(f) * V(f)$$
$$w(t) = u(t) * v(t) \Leftrightarrow W(f) = U(f)V(f)$$

Convolution in the time domain is equivalent to multiplication in the frequency domain and vice versa.

Proof of second line:

Given $u(t)$, $v(t)$ and $w(t)$ satisfying

$$w(t) = u(t)v(t) \Leftrightarrow W(f) = U(f) * V(f)$$

define dual waveforms $x(t)$, $y(t)$ and $z(t)$ as follows:

$$x(t) = U(t) \Leftrightarrow X(f) = u(-f) \quad \text{[duality]}$$
$$y(t) = V(t) \Leftrightarrow Y(f) = v(-f)$$
$$z(t) = W(t) \Leftrightarrow Z(f) = w(-f)$$

Now the convolution property becomes:

$$w(-f) = u(-f)v(-f) \Leftrightarrow W(t) = U(t) * V(t) \quad \text{[sub } t \leftrightarrow \pm f]$$
$$Z(f) = X(f)Y(f) \Leftrightarrow z(t) = x(t) * y(t) \quad \text{[duality]}$$
